least one side.

COPYRIGHT: (C)2001,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To improve fluidity, in injection sanitation and appearance and lower production cost by simplifying the structure of a cap with a comb having comb teeth pieces having injection parts and frame comb teeth pieces at both sides thereof as a technical object.

SOLUTION: A cap with comb is integrally formed of a synthetic resin. Each comb tooth piece 8 is provided with a transversely opened injection part 9 at its upper end and an injection passage 10 passing through the comb tooth piece from the injection port 9 to the lower end face of a top plate 7. A transversely opened pin hole 12 is opened at a position corresponding to the injection port 9 in a frame comb tooth piece 11 of at
